# Multilingual Chatbot

The Multilingual Chatbot is an advanced NLP application that facilitates smooth communication across various languages by understanding and responding in the user's preferred language. It features real-time language detection, automatic translation, context-aware interactions, and customizable responses. Additionally, it supports external API integrations, user session management, and an extensible architecture for adding new features and languages.

Features

1. Real-Time Language Detection
2. Automatic Translation
3. Context-Aware Interactions
4. Customizable Responses
5. External API Integrations
6. User Session Management
7. Extensible Architecture

Benefits/Impact

1. Enhanced Communication
2. Improved User Experience
3. Increased Efficiency
4. Scalable and Flexible
5. Broader Reach
